## ABOUT ME.

---

**Tokmak City, Zaporizhia, Ukraine.**

9 Feb, 1997

As a mid-senior software engineer. I have worked in the industry for the past 7+ years on projects ranging from mobile applications to web applications, from small web applications to large-scale cloud deployments. I love solving problems, especially those related to software development. My favorite part about working as a software engineer is that it allows me to be creative with my work and creates opportunities for me to learn new things every day. also it is seeing how far my skills can take me—it's exciting to be able to help other people solve problems by coming up with solutions that work.

Programming allows me to express myself creatively. I love coming up with ways to communicate what I want to say with code instead of words or pictures.
